

Nikita Boyarkin

Data Analyst / Product Analyst

[Telegram](#) · [@lofinibo](#) · [GitHub](#) · [LinkedIn](#) · [nikitaboyarkin.github.io/Personal](#) [Projects.github.io/](#)

Open to Data / Product Analyst roles.

Profile

Data Analyst (Middle) with 4+ years of experience turning complex data into actionable business insights. I work at the intersection of product, data, and experimentation — customer analytics, A/B testing, segmentation, and reporting automation that help teams move faster. Stack: SQL, Python, DuckDB, PostgreSQL, ClickHouse, Tableau, Superset, Docker, Airflow.

Skills

- SQL
- Python
- Pandas / NumPy
- DuckDB
- PostgreSQL
- ClickHouse
- A/B Testing (CUPED, AA-test, Bonferroni)
- SciPy / Statsmodels
- scikit-learn
- Cohort & Retention
- RFM Segmentation
- LTV
- SQL window functions
- Tableau
- Superset
- Matplotlib / Seaborn
- Docker
- Airflow
- Git
- cron
- GenAI / LLM APIs

Selected Projects

Cohort Analysis Dashboard [source →](#)

Python · pandas · matplotlib / seaborn · Jupyter Notebook · Tableau (Hyper API)

- Cohort retention matrix with triangular decay
- ARPU / LTV by cohort with proper observation-age caveat
- Tableau-ready export (CSV + .hyper extract)

- Reproducible seeded pipeline (seed=42)

Digital Garden [source →](#)

TypeScript · Quartz v4 · Markdown · Obsidian

- Linked-notes Zettelkasten with backlinks + graph view
- Atomic evergreen notes over chronological posts
- Quartz v4 — TypeScript-extensible, static output
- Obsidian-flavored Markdown → public site

Product Analytics + A/B on Supabase [source →](#)

Python · Streamlit · Supabase (Postgres + RLS + Edge Functions) · SQL · supabase-py

- Full-stack: Streamlit UI + Supabase Postgres + Edge Function ingest (API-key auth)
- Row Level Security on every table — a user sees only their org's rows
- SQL views compute funnel, cohort, MRR, DAU, channel conversion — the dashboard reshapes, it does not aggregate
- A/B result in the DB: control 32.1% vs treatment 37.2%, $p = 0.0034$ (chi-square)

Product Analytics Dashboard (Streamlit) [source →](#)

Python · Streamlit · pandas / NumPy

- 8,000 synthetic users, Jan 2024 – Jun 2025, deterministic seed = 42
- AARRR funnel: app_open → signup → activate → start_trial → subscribe with step drop-off
- Cohort retention heatmap (signup month × months since signup)
- Revenue: MRR growth, MRR by plan, ARPU, logo churn
- Segments: distributions + conversion + ARPU by segment / channel / country / device

Reporting Automation Telegram Bot [source →](#)

Python · aiogram / telegram-bot · SQL · cron scheduler · Tableau

- Cut weekly report prep from 1–2h to automated cron
- KPI table + sparklines delivered on schedule
- Fallback notifications on source failures
- Single consolidated pipeline replacing fragmented sources

RFM Analysis of Bank Clients [source →](#)

Python · SQL · Tableau

- Identified high-value customer segments
- Optimized marketing campaigns
- Improved retention efficiency

Scrolly English Speaking [source →](#)

Astro · TypeScript · MDX · D3 · Tailwind v4

- Scrollytelling-нарратив на Astro 6 + MDX, D3-визуализации (workflow, bars, calendar, checklist)

- Контент и визуализации разделены — доверенный data-модуль, frontmatter безопасно мёржится
- Интерактивные viz-панели через IntersectionObserver + dark/light тема + reduced-motion
- Деплой на GitHub Pages по subpath, Node 22, `astro check` в CI

SQL Analytics Case Study [source →](#)

SQL · DuckDB · Python · pandas / NumPy · pytest

- 10 self-contained SQL cases (funnel → attribution)
- DuckDB — no server, no credentials, one command
- Regression tests with deterministic invariants per case
- Synthetic deterministic data (seed=42, ~183k events)

TaskFlow — PostHog Product Analytics Pipeline [source →](#)

Python · PostHog · FastAPI · Streamlit · pandas / matplotlib · pytest / ruff · Docker

- Typed event catalog (single source of truth) + PostHog capture/identify/group with PII scrubbing
- Feature flag → onboarding A/B variant; A/B analysis with chi-square, uplift, Wilson CI + SRM check
- Day-N cohort retention, time-to-convert, revenue/LTV, first-feature → upgrade conversion
- The same metrics as SQL (BI / interview reference) + interactive Streamlit dashboard
- CI (pytest + ruff) + Docker + render.yaml for one-click deploy

This Portfolio Site [source →](#)

Astro · TypeScript · Markdown · CSS custom properties

- Astro v5 + TypeScript + Markdown content collections
- Dark/light theme with no-flash inline script
- RSS, sitemap, robots, JSON-LD, OG/Twitter meta
- Base-path-aware URLs for GitHub Pages subpath hosting

Volta Neobank — Product Analytics [source →](#)

Python · pandas / NumPy · SciPy / Statsmodels · scikit-learn · Matplotlib / Seaborn · uv + ruff

- +6.24pp KYC conversion ($Z=6.35$, $p<0.0001$), €716K/yr (48× ROI)
- +9.2pp M3 retention, +€227K/yr incremental LTV
- 4 data-driven user segments with per-segment monetization strategy
- CUPED variance reduction + AA-test (type-I = 0.050) + Bonferroni correction

Writing

- 2025-05 Чек-лист портфолио дата-аналитика
- 2025-05 Автоматизация недельных отчётов через Telegram-бота
- 2025-04 RFM-сегментация клиентов
- 2025-04 Когортный анализ удержания
- 2025-03 Почему мы перешли на байесовское A/B-тестирование

Education

- PhD, Work Psychology UMC, Moscow Sept 2022 – May 2025

- MSc, Work Psychology UMC, Moscow Sept 2020 – May 2022
- BSc, Business Informatics UMC, Moscow Sept 2016 – May 2020
